FACTORY STATISTICS.

SCOPE OF THE STATISTICS AND DEFINITIONS OF TERMS USED.

Scope.—The statistics are compiled annually in respect of—

Number and size of factories; number of persons employed in various categories; ages of persons employed; salaries and wages paid; rated horse-power of engines ordinarily in use and those in reserve or idle; book value of land, buildings, plant and machinery (not capital invested); value of material, containers, repairs and replacements, power, fuel and light (including water and lubricating oil) used; quantities and values of fuel used; value of output; value of production; and in a number of industries, quantity and value of principal materials used and articles produced.

It should be noted that statistics of factories published in this Part are not a complete record of either the income or expenditure of the undertakings concerned, and are not intended to show their financial position collectively or individually.

Factory.—For the purposes of the statistics a " factory " is an establishment in which four or more persons are employed, or power (other than manual) is used, in any manufacturing process. The following industries are not included—Farriery, Smallgoods-making, Photography Studios, Laundries, Florists and Seedsmen.

Average Number of Persons Employed.—

(A) *During Period of Operation* represents the aggregate of the average weekly number of employees in each factory—the average being calculated for the period the factory was operating during the year.

(B) *During the Whole Year* represents the aggregate of the average number of employees in each factory—the average being calculated for the period of twelve months.

All persons employed in the manufacturing activities of a factory are counted as factory employees, including operatives, managerial and clerical staff at the factory, working proprietors and " out workers." Persons engaged in selling and distribution, such as salesmen, travellers and carters engaged solely on delivery of manufactured goods are not included.

Rated Horse-Power of Engines Installed.—Statistics of power used in factories other than central electricity generating stations relate to the " total rated horse-power " of engines ordinarily in use and of engines in reserve or idle, omitting obsolete engines. In the case of central electricity generating stations the figures refer to the " total rated capacity " of engines and generators installed.

Value of Materials used includes the value, as at the factory, of the materials and stores used, containers, tools replaced, and materials used in repairs to plant. The following are exceptions :—

(*a*) Where factory operations consist of assembling manufactured parts of machines, motor cars, etc., the value of the parts is not included;

(*b*) Where goods in bulk, e.g., tobacco, tea, are made up in packets, the value of the bulk goods is not included.

Value of Fuel, etc., Consumed.—This item includes coal, coke, fuel oil, tar fuel, gas, wood, etc., and the cost of electric power and light used. For convenience the cost of lubricants and water used are also included under this heading.

Value of Output is the value of the goods manufactured or work done. It is based generally on the selling value at the factory, exclusive of cost of delivery and of excise duty (if any).

Value of Production is the value added to materials by the processes of manufacture. It is calculated by deducting from the value of output the value of materials and fuel used (as defined above).

[*Note.*—Materials, fuel, output and production are valued as at the factory.]

THE FORM AND INSTRUCTIONS.

A copy of the front of the Form issued to proprietors of factories is reprinted on the following page. Provision is made on the back of the form for the collection of particulars of materials used and articles produced.

A copy of the instructions issued for the guidance of those responsible for furnishing the information is also shown.

NOTE—(i) Factory statistics for 1952–53 and later years are affected by the transfer to Mining statistics (as from 1st July, 1952) of plants treating or crushing ore, clay, stone, gravel, etc., at the site where the material was obtained. This change affected sub-classes I–6 (Marble, Slate, etc.), and IV–5 (Extracting and Refining of Other Metals and Alloys), and, in respect of employment, represented an aggregate reduction of approximately 800 persons.

(ii) Commencing with 1953–54, the Statistical Metropolitan District was enlarged by the inclusion of 425 square miles formerly included in Country Districts (balance of the Division of Cumberland).

(iii) The figures for 1955–56 for Classes I (Treatment of Non-metalliferous Mine and Quarry Products), IV (Industrial Metals, Machines and Conveyances) and XVI (Heat, Light and Power) are not strictly comparable with those for previous years, owing to changes in the classification of certain activities within these industry groups.

NEW SOUTH WALES STATISTICS

FACTORY RETURN FOR YEAR ENDED 30th JUNE, 1955

Required under the Census Act, 1901. This form must be completed and returned through the Collector, or posted to the GOVERNMENT STATISTICIAN, 428 GEORGE STREET, SYDNEY (Box 22, G.P.O., Telephone BL 3462), not later than the 1st September, 1955.

The returns are strictly confidential and will be used solely for statistical purposes. Under no circumstances whatever will particulars of any individual business be disclosed to other individuals or Government Departments.

INSTRUCTIONS TO PERSONS FILLING IN FACTORY RETURNS

General.

1. *These returns are collected under the authority of the Census Act*, 1901, *and any person concerned who refuses or neglects to answer or answers untruly any of the questions on the return is liable to a penalty of* £20. *An extension of time will not be granted unless it can be shown that it is impracticable to supply the return within the time allowed.*

2. *Your returns will be regarded as strictly confidential. The information given in these forms is used only for statistical purposes to arrive at aggregates for each kind of industry. The contents of individual returns will not be disclosed in any way, and will not be seen by any person other than employees of this or the Commonwealth Bureau of Statistics.*

3. (*a*) *Several Industries in One Establishment.*—In large establishments where two or more industries are carried on, separate forms will be supplied, which should, if practicable, be filled in for each industry. The particulars relating to the whole establishment should be allocated, as nearly as possible, to each industry.

(*b*) *Several Branches of one Establishment in Different Locations.*—If practicable, a separate return should be completed in respect of each address. Where this is not possible a composite return covering the operation of all branches will be accepted providing the average weekly employment is shown separately for each location.

4. The line "Nature of Work Done" should be used for a brief description of the main operations or processes carried out, *e.g.*, Brick-making, Shirtmaking, Motor Repairing, Bread Baking, Sawmilling, etc.

5. Where a manufacturing business is carried on in connection with a wholesale or retail trading business, the return must be restricted to the details of the *manufacturing branch only.* That portion of the premises used for manufacturing purposes should be separately valued and shown under Part C. *Particulars concerning Salesmen, Travellers, Collectors, and Retailing Storemen must NOT be included with Persons employed in the factory, or in salaries and wages paid.*

Explanation of Items Required.

6. *Period Worked.*—The time the establishment was working during the year is to be given in calendar months, holidays during working period being also included.

7. *Average Weekly Number of Persons Employed.*—This means the average weekly during the period of operation. For example, for an establishment working the whole year the average will be the sum of the *total* employees for each week of the year divided by 52; the average for an establishment working three months will be the sum of the weekly totals divided by 13, and similarly with other periods. The total of the average numbers employed must be distributed under the various groups as shown.

Note.—Carters (on wages—not contractors) employed in bringing material for manufacture should be included, but not those engaged entirely in the delivery of manufactured goods, as the value of output of such goods is the selling value "at works," excluding all delivery costs or charges. If the carter's work be divided in this respect his time and wages should be apportioned accordingly.

8. *Salaries and Wages Paid.*—

Working Proprietors.—No amount of remuneration is required to be shown.

Other Employees.—The total amounts of salaries or wages paid to all employees during the year are required to be given.

Pay Roll Tax.—The amount paid as PAY ROLL TAX must not be included as salaries and wages paid.

9. *Engines Employed to Drive Machinery.*—Number and total rated horse-power are required separately for engines ordinarily in use and for engines in reserve or idle (*i.e.*, in use occasionally, as during periods of breakdown by other engines or power supply). Obsolete engines must be omitted. If the same power is used in the one establishment for more than one "industry" the horse-power of the engines should be allocated, if practicable, as indicated in 3 above.

10. *Value of Land and Buildings used for Works and Factory Purposes.*—Where the Land, Buildings and Fixtures are the property of the occupier, the values stated should be the depreciated values or book values less any depreciation reserve existing in respect of them. If the premises are rented, state the amount of rent payable, exclusive of rates and taxes.

11. *Value of Machinery and Plant.*—This should include the value of all machinery, implements and tools used; also plant for the conveyance of raw materials (such as trams, carts, horses, etc., and casks in the case of a brewery). In brickyards, potteries, and glassworks the value of the kiln should be included under this head, and not as a building. The values stated should be the depreciated values, or book values less any depreciation reserve existing in respect of them. Where rent is paid for machinery the amount payable must be stated.

12. *Cost of Power, Fuel and Light Used.*—Care should be exercised to see that the costs are not duplicated in any of the other items and that full particulars of quantities asked for are given for each kind of fuel. Coal used in the manufacture of coke and gas, coke used in Steel Furnaces, and acetylene gas and oxygen should not be included here but shown as a raw material opposite Item (13).

13. *Materials Used, etc.*—Item 13—The value quoted should be the cost landed at the factory of all materials actually used during the year. In addition the value of goods in process at the beginning of the year should be included in this item. All subsidies, rebates, etc., paid to the producer of the raw materials should be excluded.

Making-up or Treating Customers' Materials.—Include in Item 13, the value at cost only of maker's own materials, such as trimmings, cottons, etc. (dyes, etc., in dyeing) used, and in Part E, Item 15B, the amount charged to customers for making-up or treating their materials.

Repair Work of any Kind.—The value at cost of all materials used in repairing should be included in Item 13, while the amount charged for making repairs should be shown in Part E, Item 15B.

Other Costs of Production.—Costs such as insurance, taxation, etc., must not be included anywhere on the form. This is a return of selected items of factory statistics and it is not intended to embrace all items of cost nor to reveal profits or losses. Only those costs specifically mentioned on the form are to be shown thereon.

Assembling the Manufactured Parts of Machines, Motor Cars, etc.—Where manufacturing operations consist only or partly of assembling the manufactured parts of machines, motor cars, etc., the value of the parts should not be included in the cost of materials used, nor in the value of output. The value of output (Part E, Item 15B) should include the actual labour cost of assembling the parts, cost of fuel and power used, any additional expenses of assembly, and profit made on such work.

Finished Goods Purchased for Re-sale.—The value of finished goods purchased for re-sale without treatment, must not be included anywhere.

14. *Value of Output.*—Item 15A.—The value here given should be the selling value at factory to customers of all goods made or processed during the year (including by-products) after deducting all delivery costs and charges and after adding any bounty or price stabilization subsidy received by the manufacturer on the finished product. That portion of the goods manufactured and remaining unsold at the end of the year should be valued at current rates.

Item 15B.—The value here given should be the amount charged to customers for other work done, such as repairs, renovations and alterations and work done on commission.

Goods in Process of Manufacture.—The value of goods in process at the end of the year just completed must also be included in the value of output (Item 15B). Similarly, the value of goods in process at the beginning of the same year must be added to the "cost of materials" used (Item 13).

Costs of Installation, etc.—Where the selling price of manufactured goods includes installing or fixing (shop and window fittings, tiles, fibrous plaster sheets, etc.) the charges for transport, installation, erection or fixing of such goods must be deducted in valuing output in Item 15A. Employees engaged in such work, and their wages, must also be excluded from Part A.

15. *Excise and Sales Tax.*—Must not be included in the value of output or in the particulars given of any article manufactured.

16. *Bounty or Subsidy.*—The amount received as bounty or subsidy (of any kind) on the production of any article must be included in the "value" of goods manufactured (Item 15A).

Directions Relating to Special Industries.

Bakeries.—Carters and all persons engaged solely in delivery and in selling the commodities produced should be excluded. The output value should be the selling value of bread, etc., made, less all delivery and selling costs.

Brick, Pottery and Tile Works.—The value of materials used shown in Part D must include wages of pitmen and all other costs incidental to obtaining clay and delivering at the kiln. Such employees and the wages paid to them should, therefore, not be included in Part A. *The value of the kiln must be included as part of your plant and not as a building.*

Cold Storage.—The value of the commodities placed in the cold store should not be included in the cost of materials used (Part D) nor in the value of the output (Part E). The amount to be shown in Part E, Item 15B, should include the actual labour cost, the cost of fuel and power used, any additional expenses of storing, and profit made on such work.

Food-packing, Tobacco-cutting and Packing, Tea-blending and Packing, Bottling and Grading Establishments.—In these and other similar establishments where imported or other goods in bulk are made up in packets, but no actual manufacturing is done, only the value added to the material by the operation should be shown in Part E, Item 15B. This value may be ascertained by subtracting the cost of materials used from the wholesale selling value of the finished goods.

Newspapers, Magazines, and Journals.—If the newspaper, magazine, or journal is printed by the proprietors, only the persons employed in the printing should be included in the return. The value of the output is not required, but all other particulars must be furnished. In other cases, where the newspaper or journal is printed for the proprietors by another person, it should be treated in the return of the printer as ordinary job printing.

NOTE.—Table 169 lists in alphabetical order the principal raw materials used in factories in New South Wales, but it does not purport to show the total consumption of these items in factories. The statistics shown relate only to the total recorded usage of the raw material in a particular statistical class (i.e., industry) or classes—generally the principal classes in which the raw material is used. Raw materials used by factories which themselves produced the raw material as an intermediate product are included in the figures. Particulars shown in this table do not necessarily represent the total of a raw material used in producing any of the articles shown in Table 170.

NOTE.—Table 169 lists in alphabetical order the principal raw materials used in factories in New South Wales, but it does not purport to show the total consumption of these items in factories. The statistics shown relate only to the total recorded usage of the raw material in a particular statistical class (i.e., industry) or classes—generally the principal classes in which the raw material is used. Raw materials used by factories which themselves produced the raw material as an intermediate product are included in the figures. Particulars shown in this table do not necessarily represent the total of a raw material used in producing any of the articles shown in Table 170.
